***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a method of selecting a mutant miniature plant having a desired trait generated by natural or induced mutations, classified in class 800, subclass 298, for example.
- II. Claims 1-17, drawn to a method of selecting a mutant miniature plant having a desired trait generated by genetic engineering, classified in class 800, subclass 278, for example.
- III. Claims 1-14, drawn to method of selecting a mutant miniature plant having a desired trait generated by treatment with plant growth factors, classified in class 800, subclass 290, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). The instant specification does not disclose that these methods would be used together. The method of generating mutant miniature plant by natural and induced mutation may require use of chemical and physical agents which are not required by any of the other two groups. The method of Group II requires vectors, isolated genes, promoters and transformation and regeneration of the plants that are not required by the method of Group I or the method of Group III. The methods of Group III requires application and treatment of plant growth hormones which are not required by the method of Group I or

the method of Group II. Therefore, the three methods are all unrelated as they comprise distinct steps and utilize different products that demonstrate that each method has a different mode of operation. Therefore, each method is divergent in materials and steps. For these reasons the Inventions I, II, and III are patentably distinct.

Furthermore, the distinct steps and products require separate and distinct searches. The inventions of Groups I, II, III have a separate status in the art as shown by their different classifications. As such, it would be burdensome to search the inventions of Groups I-III together.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
